...

Or the gel was faulty, or any of a million other reasons more likely than manipulation.

...

Why more likely? He has motive, opportunity and the means. This is the third time he has tried to fake his way out of a fraud allegation

I have received confirmation from Molecular Neurodegeneration that HY Wang did indeed attempt to provide apparently manipulated images to the journal, but that they did not accept them. Original blots were requested but Dr. Wang could not provide them.

[@MicrobiomDigest](#)

Thank you for reaching out to us. This message is to address the inquiry you sent to our editor-in-chief, Dr. Bo...

For any questions, you can identify whether or not the journal received any raw data from the author's a direct answer to you and me. The data of the inquiry concern is Fig 8 of the paper, which was added to address reviewer concerns, and these data were not produced in Dr. Youshe's lab, but a "redundant" author for that council of submission, Dr. HY Wang from the City College of New York, when the potential integrity issue was raised to our attention, Dr. Youshe requested the original blot images from Dr. HY Wang for both editorial team and Springer Nature's Research Integrity Team to examine.

Upon examination, the data was found to be manipulated, and the journal rejected the paper. Dr. HY Wang and the editor found other images from the reported experiments. In, yes, Dr. HY Wang did provide a few images that he said were the original blot images and me, we didn't think so.

By the way, Dr. Youshe also provided original blot images in Fig 5-8 that were produced in his lab, and those have passed our scrutinization.

After reviewing the "original" blot images provided by Dr. HY Wang, all the authors, editors, and our publisher agreed retraction is the right call in this case.

Hope this answers your questions.
